

KEYNOTE SPEAKER: Gunnar Porada,
**EX-HACKER AND SENIOR IT-security consultant Germany/
Switzerland**

Gunnar Porada was around 14 years old (now he is 35) when he heard the first time that it's possible to make phone calls for free and he realized that the reason of "free phone calls" are just bugs in the computer of the phone companies. It was danger for him, because many criminal organizations where already very active in the scene and tried to recruit some guys or just bought the Hacked stuff.

Something went wrong with a 20 million dollar bank proof check when he was around 18 and he was sure that there are some people very angry about him. He started to think about how his live should continue. So he decided that his mission will be to help the companies in the fight against the criminal hackers. Most of the time he have to fight just against the misunderstanding of IT-Security and ignorance of the victims. He got fired out of a bank after he succeeded his (legal) job to hack them. He found a way to hack any Stock-Exchange account of them and reported it to the IT-leader of the bank who ordered this controlled attack. Beside the fact that he helps companies he also cares on private people and helps them to understand i.e. that the passport can be manipulated, the online-banking can be hacked etc. He explains them how it works and how they can protect themselves against it...
